Living Walls

'We create extra-ordinary modular walls. We were the first to explore re-usable, relocatable and fully demountable solutions and have continued to innovate. We inspire with dynamic colours within an almost unlimited colour palette. We are changing the appearance of the modern office landscape and we continue to push the limits of what is possible. We lead the industry in the use of demountable and fully relocatable systems which conserve the environment. We can reuse not replace, we limit waste . Discover our products and our pioneering ethos.'

At Maars, our fascination with the influence the interior environment can have on the human experience continues to grow. We have over our 75 years grown in our understanding about the effect of the spaces we create and in which people spend a huge proportion of their time. Can a hospital room contribute to faster recuperation? Can modular walls generate improved learning performance at schools? Maars has continued to engage and research with the end users and designers to influence and form the next iteration of our products. We believe we have opportunities which modular walls offer that can enable you to feel happier in your environment and get the best out of yourself. This can be achieved by smartly integrating acoustics, air, light, sound, colour and images. The use of the latest technologies creates innovative concepts which create a living environment in which you become inspired, perform better and feel happier. For example, Maars has put together a colour pallet for care, the so-called Healing Colours, which have been proven to contribute to recovery times. The Maars Living Walls interact with you and create the environment you need. To do so, we must look at colour, shape, detailing and use of materials, however unusual. Maars living walls are fully demountable and relocatable which means an easier more cost effective reconfiguration in the future and extends our products life cycle, it's better for the environment and it's better for your budget.

A new level of transparency

In the transparent lalinea facility, you feel like there are no boundaries, thanks to the barely visible line between the rooms and the corridors. At the same time, the highest possible acoustic performance of the lalinea system, which can deliver 48dB – enables you to focus without distraction.

Living Options

The closed wall panels allow for the integration of light, air, visuals, sound and climate control, such as our patented ventilation studs, dolby surround panels and in-wall multimedia flat-screens. In our Living Options program you will find some truly surprising possibilities.

Unlimited combinations

The laline glazed walls can be combined with the slim, solid wall profiles, made from materials such as steel, wood, veneer, fabric and leather. We can offer seamless connection in every possible combination. Our internal powder coating facility enables us to provide steel panels and sections in any RAL or PANTONE colour. Also veneer, Laminate, MFC, fabric and leather are available to produce solid panels in an almost unlimited variety.

A new freedom in design

'Lalinea combines a minimalist aesthetic with high tech production. Allow yourself to be inspired and discover the new design freedom that this technology can offer you.'

lalinea means a revolution in every aspect. The double glazed wall is only connected at the horizontal ends, creating a continuous glass wall with subtle joints. A glazed wall that even continues into the door modules, allowing the doors to be flush within the glass wall. lalinea does not have traditional door sections. The top and bottom sections, which are only 22 mm / 7/8" high, continue on into the doors. The invisible hinges and the exceptionally slim lock allows for the thinnest door sections. The unique pivot construction has been tested for more than 100,000 cycles. The automatic threshold is adjustable. In corners, the glazed walls can be connected without any solid sections.

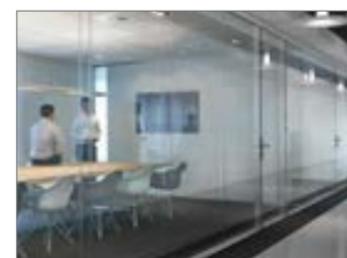

Invisible hinges because of unique pivot construction.

Fully glazed t-connection.

Uniquely narrow lock.

Flush glazing.

The minimalist bottom and top sections create a continuous line.

Lowest floor and ceiling sections in the world.

lalineia welcome to the next level

“lalineia plays with space like no other wall system. It defines rooms in a new way, with minimal lines and maximum transparency. This enables Marrs and Tsunami Axis to give you spatial freedom.”

Continuous innovation is what Maars Living Walls are renowned for. With lalineia, Maars has achieved a new level of refinement and technical perfection, the product was developed in collaboration with a leading international architectural firm with minimalist design as the starting principle. This unique systems wall was realised through the application of newly developed techniques. The extremely slim, continuous lines of the top and bottom sections, the patented flush glass connections and the absence of vertical sections make the aesthetics of lalineia unique.

The maximum transparency creates an unparalleled sense of freedom and space.

The top and bottom profiles are the lowest in the world, only 22 mm / 7/8" high with a tolerance range of +/- 13 mm / 1/2". The patented adjustable floor and ceiling connections are unique as well. The sections are available in (brushed) anodised aluminium or powder coated in any RAL or Pantone colour.

Thinking of tomorrow

‘We are sustainable. We build from beautiful, natural products. We can be reused in the future. When we reuse we are custodians of the future.’

The welfare of people in any space is central to the Maars ethos. As such, Maars is constantly looking for sustainable and responsible solutions. New production techniques are sought out and studied. Reducing, reusing and recycling has become deeply rooted within the philosophy of the company. Maars understands that production always can and always must be done efficiently. For instance, we have made enormous progress with environmentally-friendly coatings, CO2-compensation and 5S ‘lean manufacturing’. Maars can also contribute to a higher BREEAM and LEED score. In order to be able to fully control our own quality, environmental and health & safety policies, Maars has set up an integrated operational management system within which all critical processes, in terms of quality, environment and safety, are assured.

This approach has won broad recognition and Maars is ISO-9001, ISO-14001 certified as is its UK dealer partner Tsunami-Axis. By scrutinising the entire production process, we are now able to produce more efficiently and continue to reduce energy consumption. A notable example is the fact that our process water is purified ‘in house’.

Maars’ continuous commitment towards innovation and our belief that today’s products are the raw materials for tomorrow has been awarded with a Cradle to Cradle Bronze certificate* for all our wall systems.
